INTRODUCTION

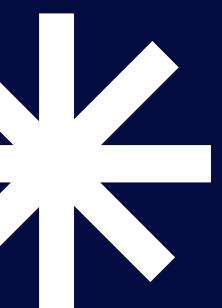

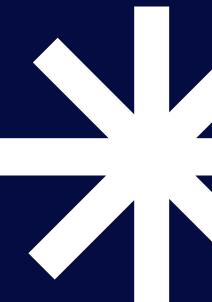

This project presents the global GDP of countries over the world . This dashboard created using Microsoft Power BI to Visualize and analyze the growth of GDP over years. It helps track attendance trends, Identify irregularities, and improve student engagement. The dashboard provides interactive insights for better academic monitoring and decision-making

PROJECT GOALS

- To analyze the rise and fall of GDP of different countries over several years.
- Compare current GDP growth with historical averages.
- Identify turning points in the economy.
- Highlights top and bottom performers.

PROCESS:

DATA PREPARATION

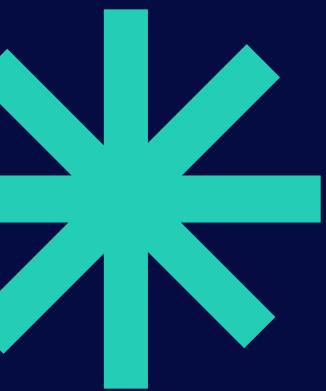

Collected and cleaned GDP data for accuracy.

DASHBOARD CREATION

Imported data into Power BI and designed interactive visuals.

ANALYSIS & INSIGHT

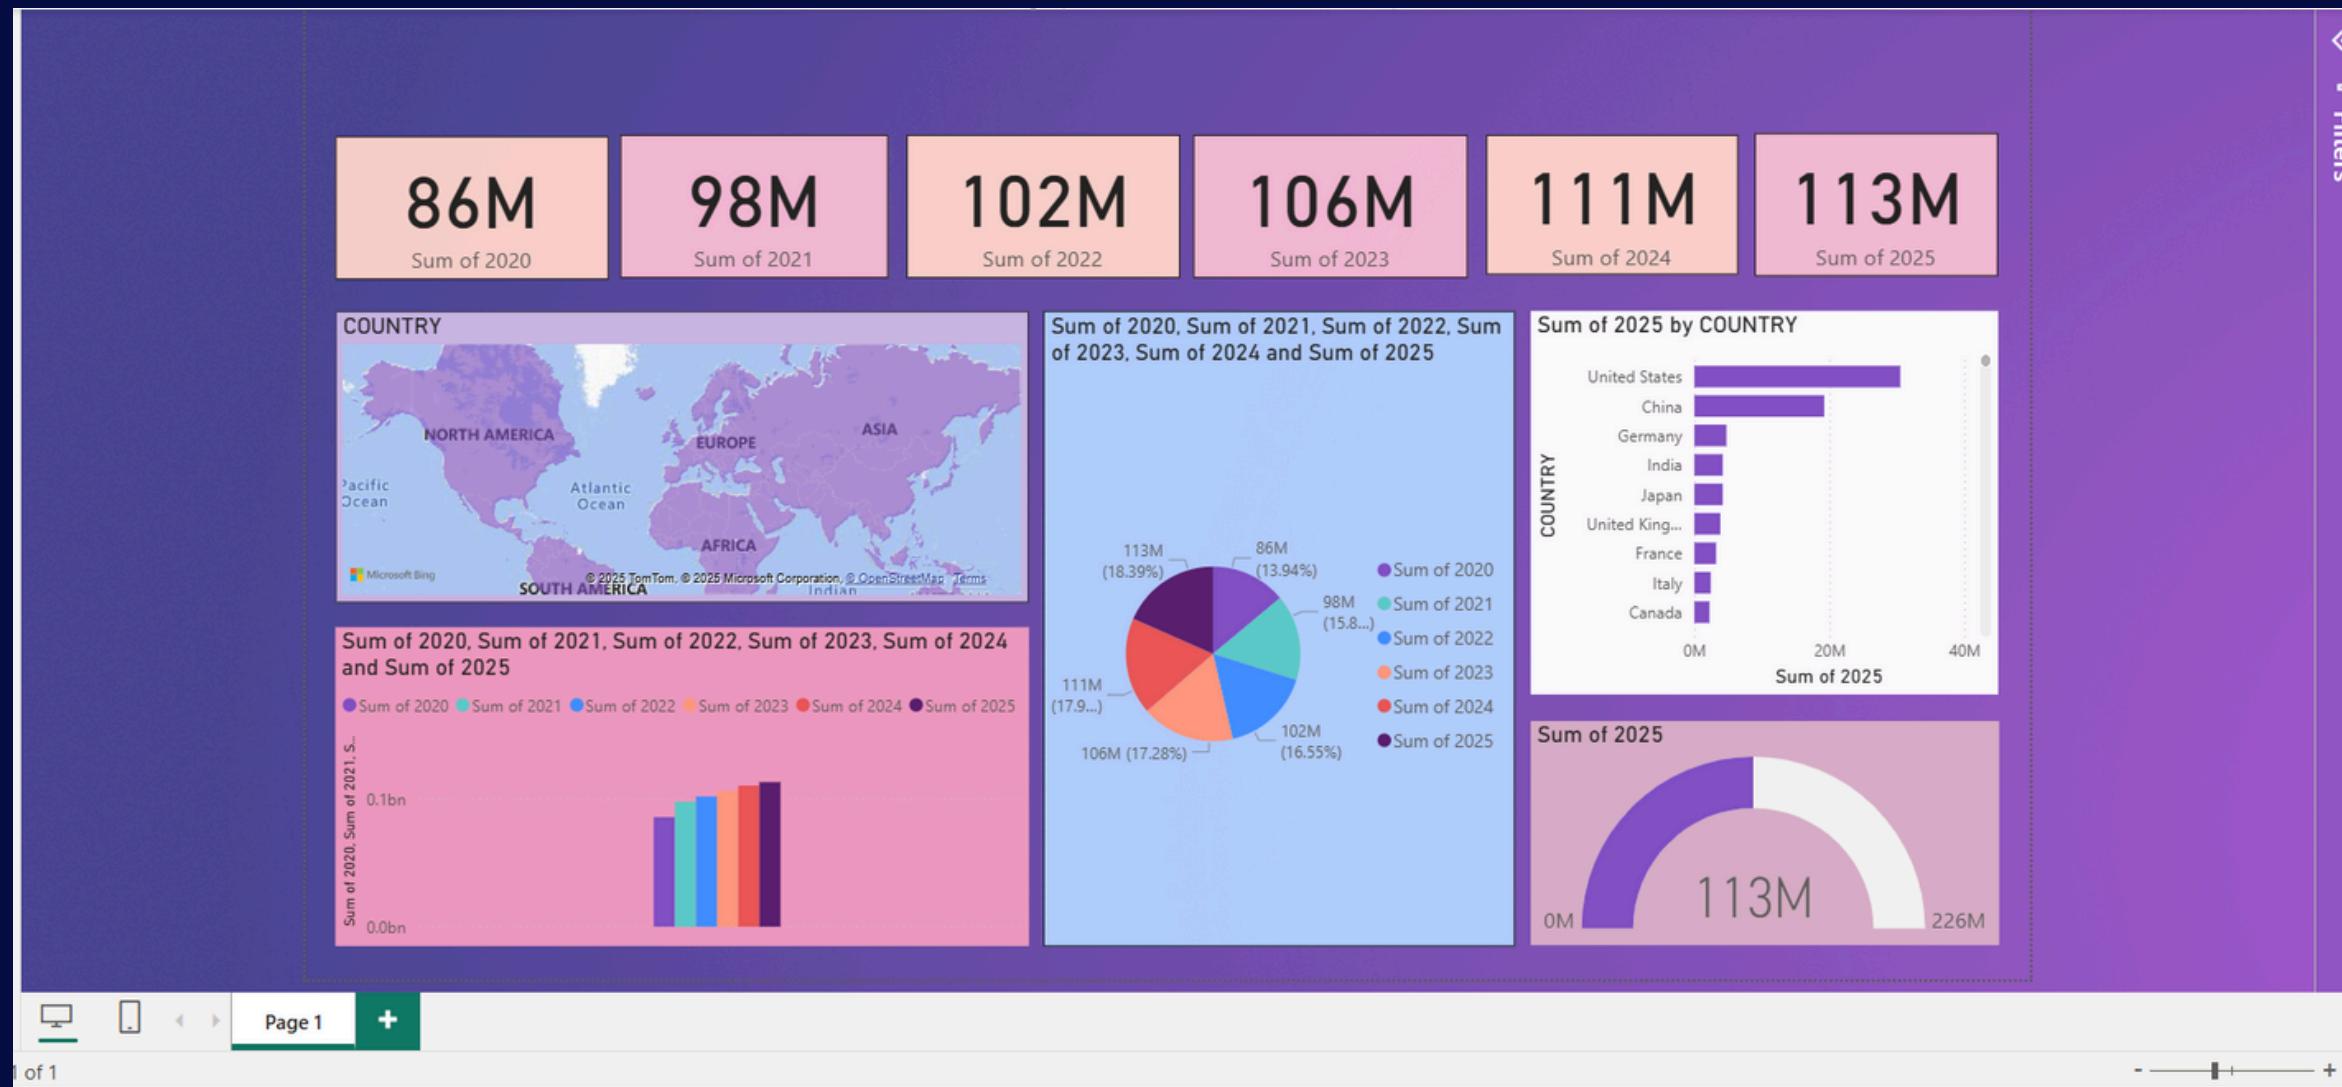

Interpreted result to identify GDP trends and improve engagement.

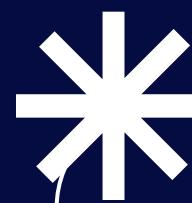

ANALYSIS:

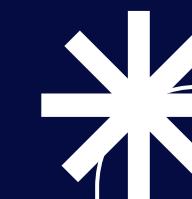

DASHBOARD

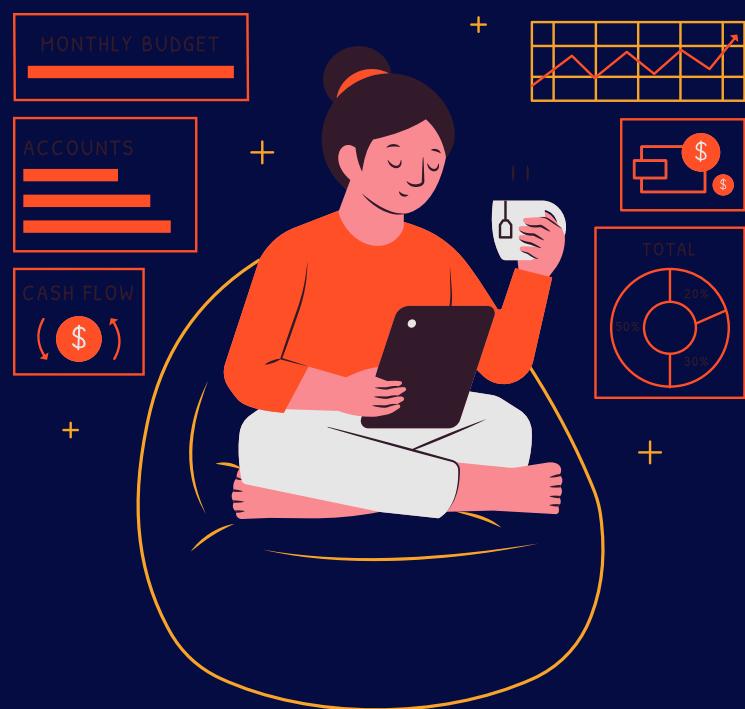

CONCLUSION

The GDP Dashboard provides a comprehensive and interactive way to understand the dynamics of economic growth. By visualizing key indicators such as sectoral contributions, regional performance, and growth trends over time, the dashboard simplifies complex economic data into clear and actionable insights.

This project demonstrates how data visualization can transform static GDP figures into meaningful stories about economic health and development. Through real-time tracking and comparative analysis, the dashboard enables policymakers, researchers, and citizens to make informed decisions and identify emerging economic patterns.

THANK YOU!
